

ApplicZone Get address of the start of application heap zone

#include <Memory.h>

Memory Manager

THz

ApplicZone();

returns address of the original application heap zone

ApplicZone returns the address for the start of the Zone structure of the application heap originally created when the application started. This is the same as the value stored in the global variable ApplZone (at 0x02AA).

Returns: a pointer to a Zone structure; the address of the start (bottom) of the original application heap zone.
