

SCSISelect Select a SCSI device with a specific ID

#include <SCSI.h>

SCSI Manager

OSErr **SCSISelect**(*targetID*);
short *targetID*; ID of device to select
 returns 16-bit Error Code; 0=no error

SCSISelect selects the device whose ID is *targetID*.

Returns: an error code indicating success or failure of the function. It will be one of:

noErr	(0)	No error
scCommErr	(2)	Breakdown in SCSI protocols

Notes: The error codes returned by **SCSI Manager** routines typically indicate only that a given operation has failed. To determine the actual cause of the failure, another SCSI command needs to be sent asking the device what went wrong.
