

**ASPGetParms**

Get three ASP parameters

#include &lt;AppleTalk.h&gt;

**AppleTalk Manager**

**OSErr**            **ASPGetParms**(*xParamBlock*, *async*);  
**XPPParamBlkPtr** *xParamBlock*; pointer to an AppleTalk parameter block  
**Boolean**        *async*;            0=await completion; 1=immediate return  
                  **returns**        Error Code; 0=no error

**ASPGetParms** returns three ASP parameters. This call does not require an open session.

*xParamBlock* is a pointer to a parameter block structure. The relevant fields are as follows:

<u>Out-InName</u>	<u>Type</u>	<u>Size</u>	<u>Offset</u>	<u>Description</u>
← csCode	<u>short</u>	2	26	Always <b>ASPGetParms</b>
← aspMaxCmdSize	<u>short</u>	2	28	Maximum size of command block
← aspQuantumSize	<u>short</u>	2	30	Maximum data size
← numSess	<u>short</u>	2	32	Number of sessions

*async* is a Boolean value. Use FALSE for normal (synchronous) operation or TRUE to enqueue the request and resume control immediately. See Async I/O.

**Returns:** an operating system Error Code.

---

Notes: aspMaxCmdSize is the maximum size of a command that can be sent to the server.

ASPQuantumSize is the maximum size of data that can be transferred to the server in a Write request or from the server in a command reply.

NumSess is the number of concurrent sessions supported by the driver.
