

CloseWD Close and release a working directory

#include <Files.h>

File Manager (PBxxx)

OSErr **CloseWD**(*wdRefNum*);
short *wdRefNum* ; id of open working directory to be closed
 returns Error Code; 0=no error

CloseWD closes a working directory.

Returns: an operating system Error Code. It will be one of:

noErr	(0)	No error
nsvErr	(-35)	No such volume

Notes: You should only call **CloseWD** or **PBCloseWD** on working directories you have created. Do not call **CloseWD** or **PBCloseWD** on working directories created by Standard File or **SysEnviron**s.
