

GetOSDefault Get default video device location and resource number

#include <Start.h>

Start Manager

GetOSDefault(*pb*);
DefOSPtr *pb* ; pointer to a 2-byte DefOSRec parameter block
returns none

GetOSDefault obtains information from parameter RAM concerning what operating system is the default.

pb is the address of a 2-byte DefOSRec structure. It contains the following fields:

<u>Out-In Name</u>	<u>Type</u>	<u>Size</u>	<u>Offset</u>	<u>Description</u>
<- sdReserved	<u>SignedByte</u>	1	0	Not in use, returns a 0
<- sdOSType	<u>SignedByte</u>	1	1	Operating system ID

Returns: none

Notes: The general application of this call is when a partitioned drive is loaded with more than one operating system.
