

GetFrontProcess Get serial number of foreground process

#include <Processes.h>

Process Manager

OSErr **GetFrontProcess** (*PSN*);

ProcessSerialNumber **PSN*; a pointer to a foreground process's serial number

returns Error Code; 0=no error

You use the **GetFrontProcess** to get the process serial number of the foreground process.

PSN is a pointer to the process serial number of the process running in the foreground

Returns: an operating system Error Code.

noErr	(0)	No error
paramErr	(-50)	Process serial number is invalid
procNotFound	(-600)	No process in the foreground

Notes: You can use this function to determine if your process or some other process is in the foreground. You can use the process serial number returned in the PSN parameter in other **Process Manager** routines.

If no process is running in the foreground, **GetFrontProcess** returns the result code `procNotFound`.
