

GetLabel

Get color and string used in the lable menu of the Finder

#include <lcons.h>

Finder Interface

<u>OSErr</u>	GetLabel (<i>labelNumber</i> , <i>labelColor</i> , <i>labelString</i>);
<u>short</u>	<i>labelNumber</i> ; number of label
<u>RGBColor</u>	<i>*labelColor</i> ; receives label color
<u>Str255</u>	<i>labelString</i> ; receives label string from Finder menu
	returns <u>Error Code</u> ; 0 = no error

GetLabel returns the actual color and string used in the label menu of the Finder and in the labels control panel. in *labelColor* and *labelString* respectively. This information is useful case you wish to include the label text or color when displaying a file's icon in your application.

Notes: This routine is not currently documented in MPW header files (hence, it is not in any THINK C or THINK Pascal header file either). The information given above comes from Macintosh Technical Note #306. This tech. note also gives the inline glue for the call as follows:

pascal OSErr **GetLabel** (short labelNumber, RGBColor labelColor,
 Str255 labelString) = {0x303C, 0x061F, 0xABC9};
