

**ASPCloseAll** Close every active session

#include <AppleTalk.h>

**AppleTalk Manager**

OSErr           **ASPCloseAll**(*xParamBlock*, *async*);  
XPPParamBlkPtr *xParamBlock*; pointer to an AppleTalk parameter block  
Boolean       *async*;           0=await completion; 1=immediate return  
                   **returns**        Error Code; 0=no error

**ASPCloseAll** closes every session that the driver has active, aborting all active requests and invoking the attention routines where provided.

*xParamBlock* is a pointer to a parameter block structure. The relevant fields are as follows:

<u>Out-InName</u>	<u>Type</u>	<u>Size</u>	<u>Offset</u>	<u>Description</u>
← csCode	<u>short</u>	2	26	Always <b>ASPCloseAll</b>

*async* is a Boolean value. Use FALSE for normal (synchronous) operation or TRUE to enqueue the request and resume control immediately. See Async I/O.

**Returns:** an operating system Error Code.

---

Notes: This call should be used carefully. **ASPCloseAll** can be used as a system level resource for making sure all sessions are closed prior to closing the driver.
