

**SReadPBlockSize**

Read the size of the indicated sBlock

#include &lt;Slots.h&gt;

**Slot Manager**

```

OSErr      SReadPBlockSize(spBlkPtr);
SpBlockPtr spBlkPtr ;      address of 56-byte Slot Parameter Block
                               structure
returns      Error Code; 0=no error

```

**SReadPBlockSize** reads the physical block size of the sBlock pointed to by spsPointer and identified by spID. Used only by the Operating System.

spBlkPtr is the address of a 56-byte **Slot Parameter Block** structure.

The relevant fields are as follows:

Out-In	Name	Type	Size	Offset	Description
→	spsPointer	<u>Ptr</u>	4	4	Structure pointer
←	spSize	<u>long</u>	4	8	Size of structure
→	spID	<u>char</u>	1	50	Structure ID
←	spByteLanes	<u>char</u>	1	53	<u>ByteLanes</u> from format block in card ROM
→	spFlags	<u>char</u>	1	54	Internal use only

Other affected parameters are:

spsResult	<u>long</u>	4	0	FUNCTION result
-----------	-------------	---	---	-----------------

**Returns:** an operating system Error Code. It will be one of:

noErr	(0)	No error
smEmptySlot	(-300)	No card in slot.
smCRCFail	(-301)	CRC check failed.
smFormatErr	(-302)	FHeader format is not Apple's
smRevisionErr	(-303)	The revision of the card's declaration ROM is wrong.
smNoDir	(-304)	Directory offset is NIL
smNosInfoArray	(-306)	The SDM could not allocate memory for the slInfo array.
smResrvErr	(-307)	A reserved field of the declaration ROM was used.
smUnExBusErr	(-308)	An unexpected bus error occurred.
smBLFieldBad	(-309)	A valid <u>ByteLanes</u> field was not found.
smDisposePErr	(-312)	An error occurred during execution of DisposPointer.
smNoBoardSRsrc	(-313)	There is no board sResource.
smGetPRErr	(-314)	Error during execution of sGetPRAMRec.
smNoBoardId	(-315)	There is no board ID.
smInitStatVErr	(-316)	The InitStatus_V field was negative after Primary or Secondary Init.
smInitTblVErr	(-317)	Error while trying to initialize the sResource Table.
smNoJmpTbl	(-318)	<b>Slot Manager</b> jump table could not be created
smBadBoardId	(-319)	Board ID was wrong; reinit the PRAM record

Notes: SReadPBlockSize also checks to see that the upper byte is 0 if the fckReserved flag is set. The parameter spsPointer points to the resulting logical block when SReadPBlockSize is done.
