

**InitUtil**

Copy Parameter RAM to low-memory variables

#include &lt;OSUtils.h&gt;

**Operating System Utilities**OSErr**InitUtil( );*****returns***Error Code; 0=no error

**InitUtil** reads the non-volatile RAM (Parameter RAM) and copies it to the data area starting at SysParam (at 0x01F8). It also stores the "raw" seconds into the variable Time (at 0x020C).

**Returns:** an OSErr; an integer Error Code. It will be one of:

noErr	(0)	No error
prlInitErr	(-88)	Validity status was not 0xA8

---

Notes: This function is called at system startup and will normally not be used by application programs.

See SysParmType for the layout of the area to which the Parameter RAM is copied.
