

FormatStr2X Convert a numeric string into a SANE number

#include <Script.h>

Script Manager

short **FormatStr2X**(*source*, *myCanonical*, *partsTable*, *x*);
ConstStr255Param *source* ;

NumFormatString **myCanonical* ;
NumberParts **partsTable* ;
extended **x* ;

The **FormatStr2X** function converts a localized formatted numeric string into an internal floating-point representation of a number(SANE). For more information see, *Macintosh Worldwide Development: Guide to System Software*.

Note: **FormatStr2X** returns an 80-bit, not a 96-bit, representation.

Returns: a short, the FormatStatus.
