

PKillSendReqAbort a **PNSendRequest** or **PSendRequest**

#include <AppleTalk.h>

AppleTalk Manager

OSErr **PKillSendReq**(*thePBptr*, *async*);
ATPPBPtr *thePBptr*; pointer to an ATPPParamBlock structure
Boolean *async*; 0=await completion; 1=immediate return
returns Error Code; 0=no error

PKillSendReq aborts **PNSendRequest** or **PSendRequest** calls.

thePBptr is a pointer to an ATPPParamBlock structure. The relevant fields are as follows:

<u>Out-InName</u>	<u>Type</u>	<u>Size</u>	<u>Offset</u>	<u>Description</u>
→ csCode	<u>short</u>	2	26	Always PKillSendRequest
→ aKillQEI	<u>Ptr</u>	1	44	Pointer to a queue element

async is a Boolean value. Use FALSE for normal (synchronous) operation or TRUE to enqueue the request and resume control immediately. See Async I/O.

Returns: an operating system Error Code. It will be one of:

noErr	(0)	No error
cbNotFound	-1102	aKillQEI does not point to a SendReq or NSendReq queue element

Notes: **PKillSendReq** is functionally equivalent to **PReITCB**, except that it takes different arguments, and will abort both **PSendRequest** and **PNSendRequest**. To abort one of these calls, place a pointer to the queue element of the call to abort in aKillQEI and issue the **PKillSendReq**.
