

SReadInfo Read a data structure into a new block

#include <Slots.h>

Slot Manager

```
OSErr      SReadInfo(spBlkPtr);
SpBlockPtr spBlkPtr ;    address of 56-byte Slot Parameter Block
                        structure
returns    Error Code; 0=no error
```

SReadInfo read the spSlot's sInfoRecord into a new record.

spBlkPtr is the address of a 56-byte **Slot Parameter Block** structure.
The relevant fields are as follows:

Out-In	Name	Type	Size	Offset	Description
→	spResult	long	4	0	FUNCTION result
→	spSlot	char	1	49	Slot number

Other parameters affected are:

spSize long 4 8QSize of structure

Returns: an operating system Error Code. It will be one of:

Notes: The trap macro **SReadInfo** reads the sInfoRecord identified by spSlot into a new record allocated by the calling program and pointed to by spResult.
