

VRemove Remove vertical retrace interrupt task

#include <Retrace.h>

Vert. Retrace Mgr

OSErr **VRemove**(*vbITaskPtr*);
QElemPtr *vbITaskPtr* ; address of a 14-byte VBLTask structure
 returns 16-bit Error Code; 0=no error

VRemove removes a previously-installed vertical retrace task from the VBL queue and stops the task from being executed on subsequent retrace interrupts.

vbITaskPtr is the address of a 14-byte VBLTask structure you installed previously via **VInstall**.

Returns: an Error Code indicating success or failure of the function. It will be one of:

noErr	(0)	no error
qErr	(-1)	No such task exists
vTypErr	(-2)	VBLTask.qType must be <u>vType</u>

Notes: It is probably NOT wise to remove tasks you did not install.
