

```
Handle arrowHandle;                                /* not an allocated Handle */

if ( PtrToHand( arrow, &arrowHandle, sizeof( Cursor) ) ) {
    /* . . . process the error . . . */
}
```

Use **PtrToXHand** if you want to overwrite the contents of an existing (already-allocated) Handle.
