

Format2Str

Convert a canonical number format to a format string

#include <Script.h>

Script Manager

```
short          Format2Str(myCanonical, partsTable, outString, positions);  
NumFormatString  *myCanonical;  
NumberParts      *partsTable ;  
Str255           outString ;  
TripleInt        *positions ;
```

The **Format2Str** function allows programs to convert previously entered canonical number formats to a format string that depends on the localized version of the system software. For more information see, *Macintosh Worldwide Development: Guide to System Software*.

Returns: a short, the FormatStatus.
