

SleepQRemove

Remove an entry from the sleep queue

#include <Power.h>

Power Manager

```
void      SleepQRemove(SleepQRecPtr);  
SleepQRecPtr  qRecPtr      pointer to a sleep queue  
            returns      none
```

You can use the **SleepQRemove** procedure to remove an entry from the sleep queue and you can use the **SleepQInstall** procedure to add an entry to the sleep queue.

The *qRecPtr* parameter is a pointer to the sleep queue record that you provided when you added your routine to the sleep queue.
