

CharExtra

Space to widen all text characters, excluding space band

#include <Quickdraw.h>**Color Quickdraw**

```
void      CharExtra( extra );  
Fixed    extra ;    character-width adjustment, fractional pixels
```

CharExtra specifies how much additional width to give all characters .

extra is a Fixed value, specifying the average number of pixels and fractional pixels to be added to each non-space character

Returns: none

Notes: This modifies the charExtra field of the current CGrafPort structure. The initial value of this field is 0, but both positive and negative number can be used. This is a cGrafPort-specific procedure and has no effect when used in conjunction with an old-style grafPort.
