

GetWTitle Obtain the text of a window's title

#include <Windows.h>

Window Manager

```
void      GetWTitle(theWindow, theTitle );  
WindowPtr  theWindow ;      window of interest  
Str255      theTitle ;      receives length-prefixed title string
```

GetWTitle obtains the title of the specified window.

theWindow is a WindowPtr obtained via **NewWindow** or **GetNewWindow**.

theTitle is the address of a pointer to a Str255. Upon return, it will contain a pointer to the text of the title.

Returns: none

Example

```
#include <Windows.h>
```

```
WindowPtr  myWindow;  
Str255      *theTitle;
```

```
/* ... */
```

```
GetWTitle( myWindow, &theTitle );  
PtoCstr( theTitle );          /* ASCIIZ for printf() */  
printf("The current title is %s\n", theTitle );
```
