

GetCurrentProcess Get the process serial number of a particular process

#include <Processes.h>

Process Manager

OSErr **GetCurrentProcess**(*PSN*);
ProcessSerialNumber **PSN* ; pointer to the currently executing process's
 serial number
returns Error Code; 0=no error

You use the **GetCurrentProcess** to get the process serial number of a particular process

PSN is a pointer to the process serial number of the process that is currently executing. The currently executing process is the one currently accessing the CPU; this is the application associated with the CurrentA5 global variable.

Returns: an operating system Error Code.
noErr (0) No error

Notes: This application can be running in either the foreground or the background.

Applications can use this function to find their own process serial number. Drivers can use this function to find the process serial number of the current process. You can use the returned process serial number in other **Process Manager** routines.
