

GetApplLimit Obtain current application heap limit

#include <Memory.h>

Memory Manager

Ptr **GetApplLimit()**;
 returns address of end of current zone + 1

GetApplLimit returns the address of the end of the application heap zone.

Returns: a Ptr; the address of the end (top) of the application heap +1.

Notes: You can get this same information by reading the global variable ApplLimit (at 0x0130).

You might call **GetApplLimit** before reducing or expanding the application zone size via **SetApplLimit**.
