TempFreeMem   Find out how much temporary memory is available

#include <<u>Memory.h</u>>   **<u>Memory Manager</u>**

<u>long</u>   **TempFreeMem( );**

The **TempFreeMem** function returns the state of a page of logical memory.

Returns: the total amount of free memory available for temporary allocation
using **<u>TempNewHandle</u>**. The returned value is a long integer that
indicates the total number of bytes free.
