SetOSDefault   Set default operating system

 #include <Start.h>   **Start Manager**

                    SetOSDefault(*pb* **)**;
DefOSPtr   *pb* ;   pointer to a 2-byte DefOSRec parameter block

                    returns   none

   SetOSDefault specifies what operating system is the default.

            pb is the address of a 2-byte DefOSRec structure. It contains the
                  following fields:

Out-In	Name	Type	Size	Offset	Description
->	sdReserved	SignedByte	1	0	Not in use, use a 0
->	sdOSTtype	SignedByte	1	1	Operating system ID

                    Returns: none

_____

 Notes: The general application of this call is when a partitioned drive is loaded
          with more than one operating system.
