UprText   Provide non-localizable uppercasing

#include <<u>Script.h</u>>   **<u>Script Manager</u>**

void   **UprText(***textPtr, len* **);**
<u>Ptr</u>   *textPtr* ;   a pointer to the text to be upper cased
<u>short</u>   *len* ;   specifies the length of the text

   The **UpperText** procedure provides non-localizable uppercase conversion of
   text up to 32 KB in length via the _UprString trap.

        textPtr is a pointer to the text to be converted to uppercase

          len is the length of the text indicated by *textPtr*

        Returns: None
