**FormatX2Str**                    Convert a SANE number into a numeric string

#include <Script.h>                                                   **Script Manager**

short                    **FormatX2Str(***x, myCanonical,  partsTable,  outString* **);**
extended                  *x* ;
NumFormatString           *\*myCanonical* ;
NumberParts               *\*partsTable*
Str255                    *outString* ;

The **FormatX2Str** function converts an internal floating-point (SANE) representation of a number into a localized formatted numeric string. For more information see, *Macintosh Worldwide Development: Guide to System Software.*

> **Note:**  If you compile your application to use the 881 option, you need to convert 96-bit numbers to 80-bit numbers before they can be passed to **FormatX2Str**.

**Returns**:    a short, the FormatStatus.
