SetTimeout   How long you want the system to wait for a hard disk response

#include <<u>Start.h</u>>   **<u>Start Manager</u>**

SetTimeout(_count_ **)**;
<u>short</u>   _count_ ;   value indicating length of waiting period

          **returns**   none

SetTimeout lets you tell the system how long to wait for a hard disk
response.

          count is the number of seconds you specify that the system should wait on
                    the hard disk. A zero in _count_ specifies the default limit of 15
                    seconds. 31 seconds is maximum.

          Returns: none
