FXInfo   structure

#include <Files.h>

typedef struct **FXInfo** {		Size	Offset	Description
short	fdIconID;	2	0	File's icon resource (see Notes)
short	fdUnused[3];	8	2	(reserved)
char	fdScript;	1	10	
char	fdXFlags;	1	11	
short	fdComment;	2	12	Resource ID of file comment (type 'FCMT')
long	fdPutAway;	4	14	Dir ID of file's home directory
} **FXInfo**;		18		

Notes: An FXInfo named ioFlXFndrInfo is embedded in the HFileInfo structure
         obtained by **PBGetCatInfo**. Field values in it can be set via
         PBSetCatInfo.

         The fdIconID field may be related to icons in some indirect way. However,
         it is NOT the resource ID of any 'ICN#' resource in the desktop file.

         The fdComment field contains the resource ID of an 'FCMT' in the Desktop
         file. It identifies a p-string displayed/modified in the Finder's "Get Info"
         menu item dialog.   See **PBSetCatInfo** for an example which changes a file's
         comment.

         The fdPutAway field is a 'hard' directory ID of the folder in which the file
         is normally displayed. If the file gets moved to the desktop, the Finder uses
         this field to implement its "Put Away" menu item.
