GetSysPPtr   Get address of start of Parameter RAM data

#include <OSUtils.h>   **Operating System Utilities**

 SysPPtr   **GetSysPPtr( );**
                returns   address of SysParmType structure

GetSysPPtr returns the address at which the Parameter RAM has been
copied; i.e., a SysParmType structure such information as the default speaker
volume, printer port configuration, etc.

Returns: a SysPPtr; the address of a 20-byte SysParmType structure. This
always returns 0x01F8.
